## **DETAILED ACTION**

### ***Election/Restrictions***

Applicant's election without traverse of group III comprising claim 11 and including new claims 12 – 19 in the reply filed on 11/23/2007 is acknowledged. Claims 1 – 10 have been canceled by the applicant.

### ***Drawings***

The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the claimed sensor comprising each of its recited features (e.g., holographic element, medium, etc.) must be shown and labeled or the feature(s) canceled from the claim(s). No new matter should be entered.

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will

Art Unit: 1797

be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

Claims 11 – 19 are rejected under 35 U.S.C. 102(e) as being anticipated by Blyth et al. (U.S. Pat. No. 6,689,316 B1) (hereinafter “Blyth”).

Regarding claims 11 and 12, Blyth teaches a method of detecting an analyte using a sensor comprising a holographic element comprising a medium comprising a porous polymer film having a defined pore volume and a hologram disposed throughout the volume of the medium (see, e.g., col. 2, line 56 – col. 3, line 35).

Blyth teaches that the medium can exhibit a variation in a physical property, such as a measurable volume or size change, induced by swelling upon contacting the sensor medium with a target analyte, such as ethanol (see, e.g., col. 6, lines 14 – 65 and Example 2).

The recitation in line 5 in claim 11 that “the medium is obtainable by formation *in situ* in the presence of a pore-forming agent” is given no patentable weight. This recitation is not considered a positively recited step of the claimed detection method. It is only the final structure of the porous medium that is given patentable weight. It is inconsequential as to how the medium was made.

Art Unit: 1797

Regarding claim 13, Blyth teaches that the optical characteristic monitored can be reflectance (see, e.g., col. 3, lines 29 – 35; col. 5, lines 24 – 36).

Claims 14 – 17 recite various pore-forming agents pertaining to how the medium is made. These claims are given no patentable weight in determining the patentability of the claimed method of using the sensor in a method of detection.

Regarding claims 18 and 19, Blyth teaches the incorporation of hydroxyethyl methacrylate polymer as a holographic medium material (see, e.g., Example 2, col. 9, lines 29 – 52).
